

Last night he bore 239 very well
in openings between fog - after fa-
vorable. —

I suppose the Northumberland Telescope is not
very accessible. I have heard its performance
is not quite first-rate - I think it will not
divide γ^2 Androm. as it ought - but still it
must give magnificent views. Cooke has just
brought down Davis's new Dial home, forgetting the
Driving Clock Cord & Weight - & having sent a
Driving Clock which seems not to have been tried -
it proving too fable in action. This man may
be a first-rate optician, but he is anything but a
man of business. —

Mrs Webb's kindest regards to Sam always
Yours affectionately
J. W. Webb.
